

Should you replace your conservatory's roof?

Ask yourself these 4 questions!

Is your conservatory too hot in the summer or too cold in the winter?

If your conservatory feels more like the inside of your fridge in the winter, it's unbearably hot in the summer or it suffers from both issues, a replacement conservatory roof can resolve them.

Can you hear noise from the wind and rain when in your conservatory?

Let's face it, it's very easy to hear the sound of rain and wind hitting against a polycarbonate roof. For those who'd like to use their conservatory in peace and quiet, this poses a major obstacle to that.

Would you like to use your conservatory for something else?

With a quiet and comfortable space at your disposal, you're able to completely alter the way in which you use your conservatory. You might want to use it as a games room of some kind, an extension of your current kitchen or maybe just a place to read in the sun.

Is your heating bill excessively high?

Polycarbonate conservatory roofs are known for suffering from excessive heat loss, putting more strain on your radiators to keep the conservatory interior warm. However, replacing the roof will lower your heating bill and it's much cheaper than replacing the whole conservatory.

If you answered yes to one or more of the questions above, enquire for more information on conservatory roof replacement today!
